## HF 1-Series Membrane Elements

---

**AXEON Low Energy HF1-Series Reverse Osmosis Membranes** are manufactured using the industry's leading membrane film technology. These membranes offer reliability, high performance and deliver consistent results. They provide increased production, high rejection rates and low energy consumption by operating at low applied pressures.

- Low Energy
- High Flow Capacities
- Improved System Performance
- Superior Quality and Cost Savings
- Individually Vacuum Tested
- Made in the U.S.A.

# AXEON HF1-Series Membrane Elements

**AXEON HF1-Series Membranes** are one of the industry's most reliable and highest performing reverse osmosis elements. **AXEON HF1-Series Membranes** are available in all standard commercial sizes and feature a protective ABS shell. Advanced membrane technology and manufacturing processes ensure high quality and performance. All elements are shipped dry for an indefinite shelf life and easier handling. **AXEON HF1-Series Membrane Elements** are 100% vacuum integrity tested and may also be ordered as individually wet tested.

## Operating Limits

■ Membrane Type:	Polyamide Thin-Film Composite	■ pH Range, Short Term Cleaning (30 Min.):	1 – 13
■ Maximum Operating Temperature:	113°F (45°C)	■ Maximum Feed Silt Density Index (SDI):	5
■ Maximum Operating Pressure:	600 psi (41 bar)	■ Chlorine Tolerance:	0 ppm
■ pH Range, Continuous Operation*:	2 – 11		

\* Maximum temperature for continuous operations above pH10 is 95° F (35°c)

**Test Parameters:** 550 TDS Filtered (5 Micron), De-Chlorinated, Municipal Feed Water, 77 Degrees F, 15% Permeate Recovery, 6.5 - 7.0 pH Range, at the Specified Operating Pressure. Data Taken After 30 Minutes of Operation. Maximum Pressure drop for each element is 15 psi. Minimum salt rejection is 96%. Permeate flow for individual elements may vary +/- 20%.

Under certain conditions, the presence of free chlorine and other oxidizing agents will cause premature membrane failure. Since oxidation damage is not covered under warranty, the manufacturer recommends removing residual free chlorine by pretreatment prior to membrane exposure. Wet tested membrane elements must be kept sealed and moist when in storage. Drying out may occur and damage the membrane permanently. Prevent elements from freezing or being exposed to direct sunlight. Wet tested elements are vacuum sealed in a polyethylene bag containing 1.0% sodium meta-bisulfite and then packaged in a cardboard box. Discard the permeate for the first twenty-four hours of operation. The permeate flow (product water flow) varies with feed water temperature.
